REPAP

Så här når vi målen 2020

- Elcertifikaten ska kompletteras med inmatningstariffer för sol, havsbaserad vind m.m
- Vita certifikat för energieffektivisering bör införas, samt trappstegsavgifter för elintensiv industri
- Biobränsle bör få skattereduktion så dessa alternativ blir billigare än fossilt bränsle
- Investeringsstöd för förnybar energi
- Energideklarationer används som styrmedel
